

Public Notice Addendum

Application No. TXR3014694

Date: November 14, 2005

Notice to interested parties:

This announcement is in reference to the recently issued Regulatory Public Notice TXR3014694. This joint public notice describes an after-the-fact request for dredging and deposition of materials within Lake Texoma. This application is currently being reviewed pursuant to Section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act of 1899.

The Corps initially determined that this proposal complied with the Texas Commission of Environmental Quality (TCEQ) Tier I project criteria relative to water quality certification (WQC). However, after recent discussions with TCEQ staff, it was concluded that this request would instead be processed under TCEQ's Tier II WQC procedures. The project proponents and all recipients of the public notice are being provided notification of this procedural change. Additionally, a request for CWA Section 401 WQC has been submitted to TCEQ for their review.

All other aspects of this public notice (including the expiration date for comments received) remain in effect. If you have any questions concerning this matter, please contact Mr. Allen Ryan of our Regulatory staff at 918-669-7618.
