PUBLIC NOTICE

REQUEST FOR PERMISSION TO ALTER A U.S. ARMY CORPS OF ENGINEERS PROJECT UNDER SECTION 408

TITLE: Public Service Company of Oklahoma (PSO) Sand Springs Substation Transmission Line Re-Termination Project (408-SWT-2021-0022)

PUBLIC NOTICE COMMENT PERIOD:

Begins: April 22, 2022

Ends: May 12, 2022

REQUESTER: In compliance with U.S.C. Title 33, Chapter 9, Subchapter 1, Section 408, the Public Service Company of Oklahoma (requester) has requested permission from the U.S. Army Corps of Engineers (USACE) for the Tulsa – West Tulsa Local Flood Control Project Levee A, Sand Springs, Tulsa County, Oklahoma.

LOCATION: Intersection of W. Morrow Rd. and S. Main Street, Sand Springs, Oklahoma (Attachment 1 and 2).

REQUESTERS PROPOSED ACTION: PSO proposes to re-terminate the existing transmission lines currently coming into the Sand Springs substation as part of an expansion and system reliability project. New structures would be located within the current PSO transmission line right-of-way and within the ponding area in the vicinity of the Levee A pump station 1. New structures would include fourteen (14) new transmission line structures within 100 feet of the levee. Eight of the new structures would be located within the ponding area. All new constructed structures would be steel monopole structures with a concrete foundation and a pier with a projection of 2 feet. Currently seven of the eight proposed structures have been constructed prior to review by USACE under 33 U.S.C. 408 and have been flagged as an encroachment. USACE review of this request will also include evaluation for actions necessary to be implemented by the requester to adequately mitigate associated volume losses to the Levee A pump station 1 ponding area.

ENVIRONMENTAL IMPACTS OF PROPOSED ACTION: USACE is currently reviewing environmental compliance documentation submitted by the requester. USACE anticipates activities proposed by PSO will not adversely impact federally threatened and endangered species that may occur within the project area.

The proposed project is currently being reviewed for impacts to cultural resources, in accordance with Section 106 of the National Historic Preservation Act, based on an area of potential effect (APE) determined based upon construction plans and Endangered Species Act figures. Tribal and Oklahoma State Historic Preservation Officer (SHPO) coordination is currently ongoing related to cultural and historic properties within the APE to include the Tulsa – West Tulsa Local Flood Protection Project Levee A based upon the age and historical significance of the levee project.

AUTHORITY: The authority to grant permission for a temporary or permanent use, occupation, or alteration of any USACE civil works project is contained in Section 14 of the Rivers and Harbors Act of 1899, as amended, codified at 33 U.S.C. 408 ("Section 408"). Section 408 authorized the Secretary of the Army, on the recommendation of the Chief of Engineers, to grant permission for the alteration or occupation or use of a public interest and will not impair the usefulness of the project. The Secretary of Army's authority under Section 408 has been delegated to the USACE, Chief of Engineers. The USACE Chief of Engineers has further delegated the authority to the USACE, Directorate of Civil Works and Division and District Engineers, depending upon the nature of the activity.

LIMITS OF SECTION 408 AUTHORITY: A requester has the responsibility to acquire all other permissions or authorizations required by federal, state, and local laws or regulations, including any required permits from the USACE Regulatory Program under Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403), Section 404 of the Clean Water Act (33 U.S.C. Section 1344), and/or Section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972 (33 U.S.C. 1413). In addition, an approval under Section 408 does not grant any property rights or exclusive privileges nor does it authorize any injury to the property or rights of others.

EVALUATION FACTORS: The decision whether to grant the requested permission for project alteration under Section 408 will be based on several factors. That decision will reflect the national concern for both protection and utilization of important resources. The benefit which reasonably may be expected to accrue from the proposal must be balanced against its reasonably foreseeable detriments. Review of requests for alteration will be reviewed by a USACE technical review team considering the following factors:

- 1) Impair the Usefulness of the Project Determination. The review team will determine if the proposed alteration would limit the ability of the USACE project to function as authorized, or would compromise or change any authorized project conditions, purposes, or outputs. In order for an alteration to be approved, the Requester must demonstrate that the alteration does not impair the usefulness of the federally authorized project.
- 2) Injurious to the Public Interest Determination. Proposed alterations will be reviewed to determine the probable impacts, including cumulative impacts, on the public interest. Factors that may be relevant to the public interest evaluation depend upon the type of USACE project being altered and the nature of the proposed alteration and may include, but are not limited to, such things as conservation, economic development, historic properties, cultural resources, environmental impacts, water supply, water quality, flood hazards, floodplains, residual risk, induced damages, navigation, shore erosion or accretion, and recreation. This evaluation will consider information received from the interested parties, including tribes, agencies, and the public. The benefits that reasonably may be expected to accrue from the proposal must be compared against its reasonably foreseeable detriments. The decision whether to approve an alteration will be determined by the consideration of whether benefits are commensurate with risks and by the net impact of the alteration on the public interest using the public interest factors.
- 3) Environmental Compliance. A decision on a Section 408 request is a federal action, and therefore subject to the National Environmental Policy Act (NEPA) and other

environmental compliance requirements. While USACE is responsible for ensuring environmental compliance, the requester is responsible for providing all information that the Tulsa District identifies as necessary to satisfy all applicable federal laws, executive orders, regulations, policies, and procedures. NEPA and other analysis completed to comply with other environmental statutes (e.g., Endangered Species Act) should be commensurate with the scale and potential effects of the activity that would alter the USACE project. The Tulsa District will work with the requester to determine the requirements, which will be scaled to the likely impacts of the proposed alteration and should convey the relevant considerations and impacts in a concise and effective manner.

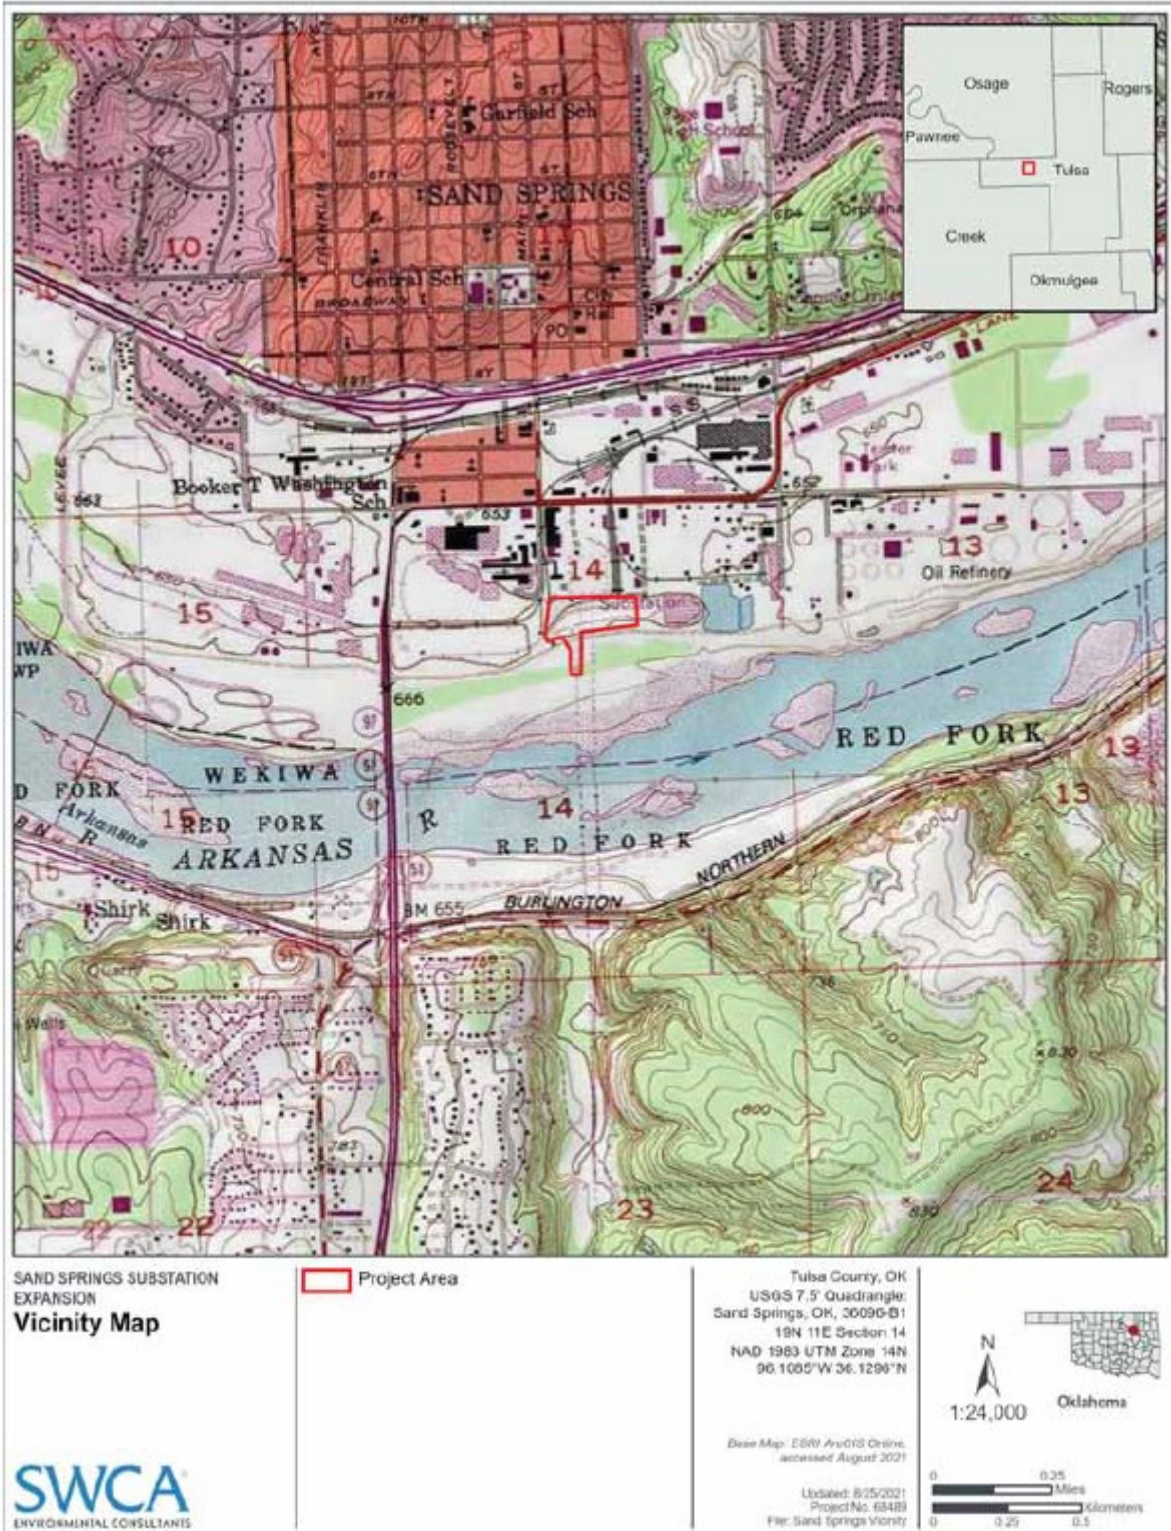

PUBLIC INVOLVEMENT: The purpose of this notice is to solicit comments from the public; federal, state, and local agencies and officials; tribes; and other interested parties regarding the Sand Springs Substation Transmission Line Re-Termination Project. Comments received within 15 days of publication of this notice will be used in the evaluation of potential impacts of the proposed action on important resources and in the evaluation of whether the proposed alteration would be injurious to the public interest and/or would impair the usefulness of the authorized project. Only the specific activities that have the potential to occupy, use, or alter Tulsa – West Tulsa Local Flood Protection Project Levee A will be evaluated. Please limit comments to the area of the alteration and those adjacent areas that would be directly or indirectly affected by the requesters proposed project.

SUBMITTING COMMENTS: Written comments, referencing Identification Number 408-SWT-2021-0022 must be submitted to the office listed below on or before May 12, 2022.
