"navigable waters of the U.S." within RHA jurisdiction (as defined by 33 CFR part 329) in the review area.

• **Complete Table 1 - Required**

NOTE: If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Section 10 navigable waters list, **DO NOT USE THIS FORM TO MAKE THE DETERMINATION.** The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Section 10 RHA navigability determination.

B. CLEAN WATER ACT (CWA) SECTION 404 DETERMINATION OF JURISDICTION: "waters of the U.S." within CWA jurisdiction (as defined by 33 CFR part 328.3) in the review area. Check all that apply.

(a)(1): All waters which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide. (Traditional Navigable Waters (TNWs))

• **Complete Table 1 - Required**

This AJD includes a case-specific (a)(1) TNW (Section 404 navigable-in-fact) determination on a water that has not previously been designated as such. Documentation required for this case-specific (a)(1) TNW determination is attached.

(a)(2): All interstate waters, including interstate wetlands.

• **Complete Table 2 - Required**

(a)(3): The territorial seas.

• **Complete Table 3 - Required**

(a)(4): All impoundments of waters otherwise identified as waters of the U.S. under 33 CFR part 328.3.

• **Complete Table 4 - Required**

(a)(5): All tributaries, as defined in 33 CFR part 328.3, of waters identified in paragraphs (a)(1)-(a)(3) of 33 CFR part 328.3.

• **Complete Table 5 - Required**

(a)(6): All waters adjacent to a water identified in paragraphs (a)(1)-(a)(5) of 33 CFR part 328.3, including wetlands, ponds, lakes, oxbows, impoundments, and similar waters.

(c)(2)(iii): All waters located within 1,500 feet of the high tide line of a water identified in paragraphs (a)(1) or (a)(3) of 33 CFR part 328.3, and all waters within 1,500 feet of the OHWM of the Great Lakes.

(a)(7): All waters identified in 33 CFR 328.3(a)(7)(i)-(v) where they are determined, on a case-specific basis, to have a significant nexus to a water identified in paragraphs (a)(1)-(a)(3) of 33 CFR part 328.3.

• **Complete Table 7 for the significant nexus determination. Attach a map delineating the SPOE watershed boundary with (a)(7) waters identified in the similarly situated analysis. - Required**

D. ADDITIONAL COMMENTS TO SUPPORT AJD: The review area is comprised of several small depressional emergent wetlands that appear to be man made from agricultural related land uses. These features were determined to not have a significant nexus to the nearest A2 water.

¹ In many cases these excluded features will not be specifically identified on the AJD form, unless specifically requested. Corps Districts may, in case-by-case instances, choose to identify some or all of these features within the review area.

1	SWT-2019-496-01 (PEM1-1)	The Cimmaron River	<p>SPOE watershed: HUC 1105000208, 243,330 acres. The potential A-8 waters are 48 miles to the Cimarron River (A2). Based on review of FEMA floodplain data, the project is not located within a mapped floodplain, it is in zone X. The subject waters are approximately 350 linear feet from the nearest tributary which would provide a direct connection to the Cimarron River. Thus these waters are not A-6 waters.</p> <p>The AJD report described several small and generally round depressions surrounded by a mixed grass field were delineated as emergent wetland. These features all exhibited the same wetland characteristics and were collectively delineated as PEM1-1. The small depressions were not delineated within 100 feet of any lotic or lentic water body and were not located within a mapped floodplain. Therefore, the features are not adjacent and potentially non-jurisdictional.</p> <p>Based on the significant nexus evaluation, no other similarly situated wetlands were identified within the SPOE, thus the onsite wetlands were the only wetlands being considered as similarly situated for this evaluation. Due to the small size of the wetlands, the lack of other similarly situated wetlands within the SPOE and SVL, the distance to and lack of connectivity to the downstream waters, the wetlands were determined to have no more than an insubstantial or speculative effect on the functions of the downstream waters (sediment trapping, nutrient recycling, pollutant trapping, transformation, filtering, and transport, retention and attenuation of flood waters, runoff storage, contribution of flow, export of organic matter, export of food</p>

			resources, provision of life cycle dependent aquatic habitat). In consideration of these findings, the subject waters have been determined to have no significant nexus to the Cimarron River.
